

sansetap.no

- Vision and hearing at all ages

Vision and hearing are considered our most important senses. Some people have congenital sensory loss. Others experience impaired vision and/or hearing loss during their lifetime.

sansetap.no seeks to convey information about vision, hearing, and dual sensory loss, with a focus on coping skills, and available opportunities for people of all ages.

The target groups are professionals, people who have sensory loss, their family, and social networks.

The content is interdisciplinary and diverse. The portal is organized by age and type of disability:

- **Portraits** - small video sequences of play and activity from pre-school, school, work, and everyday life.
- **Vision and hearing** - health-related information, animations and simulations on how it can be to have reduced vision and hearing impairment.
- **Active participation** - communication, coping skills, and activities of daily living.
- **Facilitation** - how to facilitate optimal participation?

In addition, you will also find information about:

- relevant government agencies
- rights and services provided by the government
- user organizations
- sight and hearing related diagnoses, conditions, diseases and injuries
- FAQ - Frequently Asked Questions
- links and references to further reading

The website has an emphasis on Universal Design.

E-mail: post@sansetap.no

The website and its web design is the result of a collaboration between Statped and InterMedia at the University of Oslo.

The web portal was relaunched in 2012 with support from the Norwegian Health Directorate. Statped is now responsible for the further administration of the website.
